Chromosome Analysis Report: 007604

Report Date: March 23, 2012

Cell Line: RIV 22 Specimen: iPSC on Matrigel
Passage #: 18 Cell Line Gender: Male
Date of Sample: 3/15/2012 Reason for Testing: new line
Date Completed: 3/23/2012 Investigator: Duncan Liew, UC Riverside

Specimen: iPSC on Matrigel
Cell Line Gender: Male
Reason for Testing: new line
Investigator: Duncan Liew, UC Riverside

Results: 46,XY,dup(1)(q32.1q32.3)[14]/47,XY,dup(1)(q32.1q32.3),+12[6]

Cell: S02-20
Slide: 2-R1(16)KARYOTYPE
Slide Type: Karyotyping

# of Cells Counted: 20
# of Cells Karyotyped: 4
# of Cells Analyzed: 8
Band Level: 425-525

Interpretation:
This is an abnormal karyotype with two related aberrant clones. The predominant clone (fourteen of twenty cells examined) has a structural abnormality in the long (q) arm of chromosome 1 as the only abnormality. This aberration appears to be an interstitial duplication. The secondary clone (six of twenty cells examined) has trisomy 12 in addition to the 1q abnormality. Both abnormalities are recurrent in human pluripotent stem cell cultures. Parental cell line karyotyping is recommended to determine the basis of the structural change.

Completed by Kim Leonhard, CG(ASCP), on 3/22/2012
Reviewed and interpreted by Karen Dyer Montgomery, PhD, FACMG, on 3/23/2012

Limitations:
This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as “band level”, i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as “# of cells counted”.

This assay was conducted solely for listed investigator/institution. The results may not be relied upon by any other party without the prior written consent of the Director of the WiCell Cytogenetics Laboratory. The results of this assay are for research use only. If the results of this assay are to be used for any other purpose, contact the Director of the WiCell Cytogenetics Laboratory.
